

150W Halogen Sensor Light

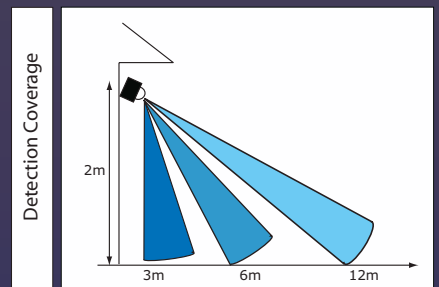

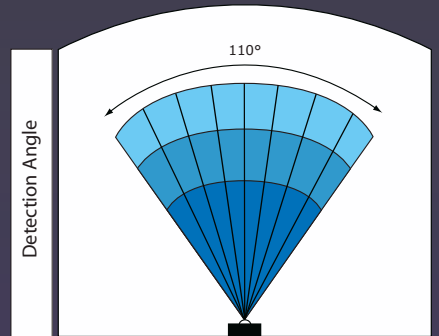

Multi-direction sensor to detect movements at night or dark places

SIDE VIEW

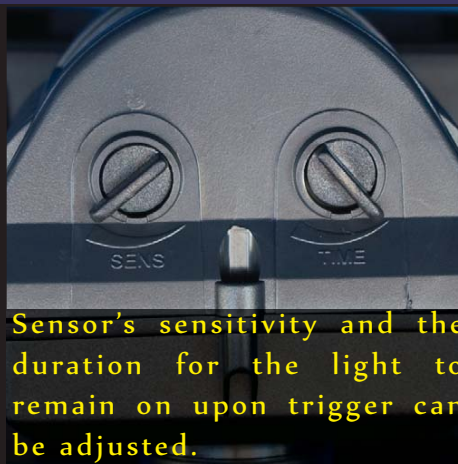

DETECTION

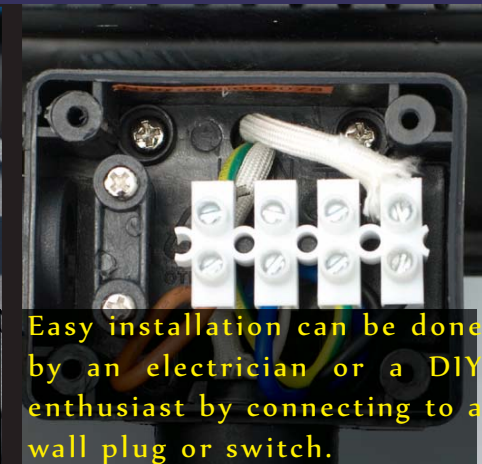

Its petite size is great as it blends into the background of your garden and illuminates the foliage. It is great for lighting up the narrower sections of your garden or garage. If you have a bigger garden or garage and would like to have this non-intrusive fixture to also blend into the background, you could place multiple sensor lights at various strategic locations and achieve similar luminosity as the other products with higher wattage.

Technical Specifications

Watts	150W
Colour	Black
Height/Width	205mm / 175mm
Detection Method	Passive Infrared
Housing Design	Water Resistant
IP Rating	IP44
Auto Stop Time	10 seconds to 5 minutes
Sensor Angle	Horizontal 160 degree, vertical 180 degree
Detection Coverage	110 degree elliptical view field, 12m forward

Sensor's sensitivity and the duration for the light to remain on upon trigger can be adjusted.

Easy installation can be done by an electrician or a DIY enthusiast by connecting to a wall plug or switch.
